

Package: err (via r-universe)

June 22, 2024

Title Customizable Object Sensitive Messages

Version 0.2.0.9000

Description Messages should provide users with readable information about R objects without flooding their console. 'cc()' concatenates vector and data frame values into a grammatically correct string using commas, an ellipsis and conjunction. 'cn()' allows the user to define a string which varies based on a count. 'co()' combines the two to produce a customizable object aware string. The package further facilitates this process by providing five 'sprintf'-like types such as '%n' for the length of an object and '%o' for its name as well as wrappers for pasting objects and issuing errors, warnings and messages.

cc	<i>Concatenation with Commas</i>
----	----------------------------------

Description

Concatenates object values into a string with each value separated by a comma and possibly the last value separated by a conjunction.

Usage

```
## Default S3 method:
cc(
  object,
  conjunction = NULL,
  bracket = "",
  ellipsis = 10,
  oxford = FALSE,
  ...
)

## S3 method for class 'character'
cc(
  object,
  conjunction = NULL,
  bracket = "'",
  ellipsis = 10,
  oxford = FALSE,
  ...
)

## S3 method for class 'factor'
cc(
  object,
  conjunction = NULL,
  bracket = "'",
  ellipsis = 10,
  oxford = FALSE,
  ...
)

## S3 method for class 'data.frame'
cc(object, conjunction = NULL, ellipsis = 10, oxford = FALSE, ...)
```

Arguments

object	The object with values to concatenate.
conjunction	A string of the conjunction to separate the last value by or NULL.
bracket	A string to bracket the values by.
ellipsis	A count of the total number of values required to use an ellipsis.
oxford	A flag indicating whether to use the Oxford comma (if conjunction).
...	Unused

See Also

[co](#)

Examples

```
cc(c(1,1,1:2))
cc(100:1)
cc(1:100, "and")
cc(100:1, "or", bracket = "|", ellipsis = 5, oxford = TRUE)
cc(mtcars)
```

cn

Customizable Number Aware String

Description

Customizable Number Aware String

Usage

```
cn(
  n,
  one = "there %r %n value%s",
  some = one,
  none = some,
  lots = some,
  nlots = 10
)
```

Arguments

n	A count of the number.
one	The string to return if n = 1
some	The string to return if n is in 2, 3, ..., nlots - 1
none	The string to return if n = 0
lots	The string to return if n >= nlots
nlots	A count of the number of values to consider to be lots

Value

A string of the updated message.

sprintf-like types

The following sprintf-like types can be used in the custom messages:

- n the length of the object
- s 's' if n != 1 otherwise "

See Also

[cc](#) and [co](#)

Examples

```
cn(0)
cn(1)
cn(4)
```

co

Customizable Object Aware String

Description

Produces a fully customizable object aware string with consecutive values separated by columns.

Usage

```
## Default S3 method:
co(
  object,
  one = "%o has %n value%s: %c",
  some = one,
  none = gsub(": ", "", some),
  lots = some,
  nlots = 10,
  conjunction = NULL,
  bracket = "",
  ellipsis = nlots,
  oxford = FALSE,
  object_name = substitute(object),
  ...
)
## S3 method for class 'character'
co(
```

```
object,
one = "%o has %n value%s: %c",
some = one,
none = gsub(": ", "", some),
lots = some,
nlots = 10,
conjunction = NULL,
bracket = "'",
ellipsis = nlots,
oxford = FALSE,
object_name = substitute(object),
...
)

## S3 method for class 'factor'
co(
  object,
  one = "%o has %n value%s: %c",
  some = one,
  none = gsub(": ", "", some),
  lots = some,
  nlots = 10,
  conjunction = NULL,
  bracket = "'",
  ellipsis = nlots,
  oxford = FALSE,
  object_name = substitute(object),
  ...
)

## S3 method for class 'data.frame'
co(
  object,
  one = "%o has %n column%s\n%c",
  some = one,
  none = none,
  lots = some,
  nlots = 10,
  conjunction = NULL,
  ellipsis = nlots,
  oxford = FALSE,
  object_name = substitute(object),
  ...
)
```

Arguments

object The object of length n

one	The string to return if n = 1
some	The string to return if n is in 2, 3, ..., nlots - 1
none	The string to return if n = 0
lots	The string to return if n >= nlots
nlots	A count of the number of values to consider to be lots
conjunction	A string of the conjunction to separate the last value by or NULL.
bracket	A string to bracket the values by.
ellipsis	A count of the total number of values required to use an ellipsis.
oxford	A flag indicating whether to use the Oxford comma (if conjunction).
object_name	A string of the object name.
...	Unused.

sprintf-like types

The following sprintf-like types can be used in the custom messages:

- c the object as a comma separated list (produced by a [cc](#) function)
- n the length of the object
- o the name of the object
- s 's' if n != 1 otherwise "
- r 'are' if n != 1 otherwise 'is'

See Also

[cc](#)

Examples

```
co(character())
x <- "fox"
co(x)
co(c(1,2,5))
co(1:10)
co(datasets::mtcars)
```

err	<i>Error</i>
-----	--------------

Description

Stops execution and throws an error without the call as part of the error message.

Usage

```
err(...)
```

Arguments

...	zero or more objects which can be coerced to character
-----	--

See Also

[stop](#), [wrn](#), [msg](#) and [co](#)

err_wrappers	<i>Wrappers with Conjunction and " Brackets.</i>
--------------	--

Description

Wrappers with Conjunction and " Brackets.

Usage

```
cc_and(object)

cc_or(object)

co_and(
  object,
  one = "%o has %n value%s: %c",
  object_name = substitute(object)
)

co_or(
  object,
  one = "%o has %n value%s: %c",
  object_name = substitute(object)
)
```

Arguments

<code>object</code>	The object with values to concatenate.
<code>one</code>	The string to return if $n = 1$
<code>object_name</code>	A string of the object name.

Functions

- `cc_and`: Concatenation with Commas and And Conjunction
- `cc_or`: Concatenation with Commas and Or Conjunction
- `co_and`: Customizable Object Aware String and And Conjunction
- `co_or`: Customizable Object Aware String and Or Conjunction

See Also

[cc](#) and [co](#)

Examples

```
cc_and(1:100)
cc_or(100:1)
co_and(1:100)
co_or(100:1)
```

<code>msg</code>	<i>Message</i>
------------------	----------------

Description

Generates a diagnostic message.

Usage

```
msg(...)
```

Arguments

<code>...</code>	zero or more objects which can be coerced to character
------------------	--

See Also

[message](#), [err](#), [wrn](#) and [and](#) [co](#)

p	<i>Paste</i>
---	--------------

Description

Wrappers on `paste` and `paste0` to increase the readability of code.

Usage

```
p(..., sep = " ", collapse = NULL)  
p0(..., collapse = NULL)
```

Arguments

...	one or more R objects, to be converted to character vectors.
sep	a character string to separate the terms. Not <code>NA_character_</code> .
collapse	an optional character string to separate the results. Not <code>NA_character_</code> .

Value

A string of the pasted values.

Functions

- `p0`: Paste0

Examples

```
p("The", "red")  
p0("ard", "vark")
```

wrn	<i>Warning</i>
-----	----------------

Description

Immediately outputs an warning without the call as part of the error message that as far as possible is a single line.

Usage

```
wrn(...)
```

Arguments

... zero or more objects which can be coerced to character

See Also

[warning](#), [err](#), [msg](#) and [co](#)
